Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A cooking device for use with a cooking chamber of a barbecue grill, the cooking device comprising:

a curvilinear central portion having a cooking surface; and,

an annular flange ~~extending depending~~ from an outer portion of the central portion, the flange adapted to engage an inner surface of the cooking chamber and support the cooking device above a heat source positioned in a lower portion of the cooking chamber.

2. (Original) The cooking device of claim 1 further comprising at least one aperture in the flange wherein the aperture is adapted to permit a user to grasp the cooking device.

3. (Original) The cooking device of claim 1 further comprising at least one handle adapted to permit a user to grasp the cooking device.

4. (Original) The cooking device of claim 1 wherein the central portion has a generally flat bottom wall.

5. (Canceled)

6. (Original) The cooking device of claim 1 wherein the annular flange is comprised of a plurality of flange segments extending radially outward relative to the central portion.

7-8. (Canceled)

9. (Currently Amended) A cooking device for use within a cooking chamber of a barbecue grill, the cooking device comprising:

a generally annular top wall;

a central portion recessed from the top wall, the central portion having a curvilinear cooking surface; and,

~~at least one~~ a flange extending from the top wall, the ~~at least one~~ flange adapted configured to engage an inner surface of the cooking chamber and support the cooking device in the cooking chamber.

10. (Original) The cooking device of claim 9 wherein the flange is a circumferential body

Page 3

including at least one aperture adapted to permit a user to grasp the cooking device.

11. (Original) The cooking device of claim 9 further comprising at least one handle adapted to permit a user to grasp the cooking device, the handle operably connected to the top wall.

12. (Original) The cooking device of claim 9 wherein the central portion has a generally flat bottom wall.

13. (Canceled)

14. (Original) The cooking device of claim 13 wherein the uppermost surface is below an interference region thereby permitting the cooking chamber to receive a cover.

15. (Original) The cooking device of claim 9 wherein the at least one flange has an engaging surface adapted to mate with a support structure of the cooking chamber.

16-17. (Canceled)

18. (Currently Amended) An outdoor cooking assembly comprising:

a barbecue grill assembly having a cooking chamber and a mating lid, the cooking chamber having a heat source positioned in a lower portion of the cooking chamber;

a cooking pan removably positioned within the cooking chamber, the cooking pan having a curvilinear central portion with a cooking surface, the cooking pan having a flange extending from an outer edge of the central portion, the flange having an engaging surface; and,

at least one support member positioned on an inner surface of the cooking chamber, wherein the support member adapted to engage a portion of the engaging surface to support the cooking pan engages the flange engaging surface to support the cooking pan within the cooking chamber.

19. (Original) The outdoor cooking assembly of claim 18 further comprising at least one aperture in the flange, the aperture adapted to permit a user to grasp the cooking pan.

20. (Original) The outdoor cooking assembly of claim 18 wherein the engagement of the flange and the support member forms a cavity in the cooking chamber.

21. (Original) The outdoor cooking assembly of claim 20 wherein the cavity is generally bounded by the heat source and the cooking pan.

22. (Original) The outdoor cooking assembly of claim 18 wherein the support member is a ledge extending inward from the inner surface of the cooking chamber.

Page 4

23. (Original) The outdoor cooking assembly of claim 18 wherein the support member is a tab extending inward from the inner surface of the cooking chamber.

24-39. (Canceled)

40. (New) A cooking device for use with a cooking chamber of a barbecue grill, the cooking device comprising:

a generally annular top wall;

a central portion recessed from the top wall, the central portion having a cooking surface;

a flange depending from the top wall; and,

at least one extendable handle operably connected to the top wall.

41. (New) The cooking device of claim 40 wherein the extendable handle is movable between a first position wherein the handle rests against a portion of the top wall, and a second position wherein the handle extends vertically from the top wall.

42. (New) The cooking device of claim 41 wherein the top wall has a pair of openings that receive a portion of the handle.

43. (New) The cooking device of claim 41 wherein the handle has at least one retaining element that prevents the handle from being disengaged with the top wall in the second position.

44. (New) The cooking device of claim 40 wherein the flange has a rim that defines an engaging surface to engage the cooking chamber.

45. (New) The cooking device of claim 44 wherein the top wall defines an uppermost surface of the cooking device that is positioned at a height above the rim of the flange.

46. (New) The cooking device of claim 40 wherein the flange has a plurality of openings that vents the cooking chamber during use of the cooking device with the barbecue grill.

47. (New) A cooking device for use with a cooking chamber of a barbecue grill, the cooking device comprising:

a curvilinear central portion having a cooking surface;

an annular top wall extending from an outer edge of the central portion; and,

a flange depending from the top wall wherein the flange has an outer rim that is

Page 5

positioned radially outward from the top wall and wherein the rim is configured to engage an inner surface of the cooking chamber.

48. (New) The cooking device of claim 47 wherein the flange depends from the top wall at an angle between 95 and 165 degrees.

49. (New) The cooking device of claim 47 wherein the top wall defines a first circumference and the rim of the flange defines a second circumference of the cooking device, wherein the second circumference is greater than the first circumference

50. (New) The cooking device of claim 47 further comprising a collapsible handle connected to the top wall wherein the handle is movable between a first position wherein the handle rests against a portion of the top wall, and a second position wherein the handle extends a distance away from the top wall.

51. (New) The cooking device of claim 50 wherein the handle has a curvilinear configuration with an intermediate segment that is positioned radially outward of the top wall in the first position.

52. (New) The cooking device of claim 51 wherein the intermediate segment of the handle is positioned radially inward of the rim of the flange in the first position.

53. (New) The cooking device of claim 51 wherein the handle has a pair of peripheral segments about the intermediate segment wherein the peripheral segments engage the top wall in the first position.

54. (New) The cooking device of claim 53 wherein the peripheral segments of the handle are positioned radially inward of the rim of the flange in the first position.

55. (New) The cooking device of claim 53 wherein the peripheral segments of the handle have a retaining element that maintains the connection between the handle and the top wall in the second position.

56. (New) An outdoor cooking assembly comprising:
a barbecue grill assembly having a cooking chamber and a mating lid, the cooking chamber having a heat source positioned in a lower portion of the cooking chamber;
a cooking pan removably positioned within the cooking chamber, the cooking pan having a curvilinear central portion with a cooking surface, the cooking pan further having a

Page 6

generally annular top wall and a flange depending from the top wall wherein flange has an engaging surface, the cooking pan further having at least one collapsible handle connected to the top wall; and, at least one support tab extending radially inward from an inner surface of the cooking chamber, the support tab configured to engage a portion of the flange engaging surface to support the cooking pan within the cooking chamber.

57. (New) The cooking assembly of claim 56 wherein the handle is movable between a first position wherein the handle rests against a portion of the top wall, and a second position wherein the handle extends a distance away from the top wall.

58. (New) The cooking assembly of claim 57 wherein in the first position, the handle does not interfere with the mating of the lid and the cooking chamber.

59. (New) The cooking assembly of claim 56 wherein the cooking chamber has an upper rim that defines a plane and wherein the top wall of the cooking pan does not extend past the plane.

60. (New) The cooking assembly of claim 56 wherein a cavity is defined between the cooking pan and a heat source of the cooking chamber.
